

Preface

One of the most exciting questions for mankind is whether we are alone in the universe. That intelligent nonhuman beings exist was commonly believed in prehistoric times as well as in antiquity. Creatures such as giants, centaurs, angels, and fairies were essential and universally accepted parts of Greek, Jewish, and Germanic mythologies. Although no fossil traces of such beings have ever been found, most of us firmly believe that nonhuman intelligent beings do indeed exist. This conviction is derived from the staggering size of the universe with roughly 100 billion times 100 billion (10^{22}) stars, which makes it inconceivable that we could be the only intelligent society in the universe. Indeed, modern science has shown that since the Copernican revolution all attempts to define our position as an exceptional one in the universe have failed dismally.

But if other intelligent civilizations do exist, how can we find them? Why is there no terrestrial or astronomical trace of them, despite great technological advances in recent centuries and especially in modern times? Why have we never found artifacts discarded by visiting aliens, which would convincingly prove the existence of nonhuman intelligent beings? Is the number of planets on which life is able to evolve too small, or is the formation of life – and particularly intelligent life – an extremely rare event? Could these intelligent societies face insurmountable difficulties in traveling over large galactic distances, or do they no longer exist?

Recent advances in search techniques for planets, in the theory of planet formation, and particularly in biochemistry, molecular, and cell biology are about to give answers to these questions: how life appeared and how many planets can be expected in the universe on which life, and eventually intelligent life, developed. New in this book is the argument that, by thinking carefully about the future development of mankind, one can gain insight into the nature of extraterrestrial civilizations.

The book consists of three parts: planets, life, and intelligence. In *Part I*, Chaps. 1–3 discuss stars, galaxies, and the origin of chemical elements, our recent planet formation theories, the search methods for extrasolar planets and what has been found so far. Chapter 4, “Planets suitable for life”, describes what constitutes an Earth-like planet and how many of them can be expected in the universe. In *Part II*, Chaps. 5 and 6 outline life and its

origin on Earth, how it evolved, and how intelligent life developed. Chap. 7 discusses the search for extraterrestrial life and intelligent societies. In *Part III*, Chap. 8, “The future of mankind”, gives possible insights into what can be expected about the nature of extraterrestrials. Finally, Chap. 9, on extraterrestrial intelligent life, constructs a likely picture of these beings and attempts to answer the question of why they don’t interact with us.

Preface of the second edition

In the first edition of this book it was argued that the uniqueness of human intelligence is the consequence of a very large brain and man’s outstanding specializations in communication and tool use. No other life form on Earth is able to communicate in such a detailed manner by both vision and language and is able to handle so many diverse objects and tools. Yet apes, monkeys, dogs, elephants, seals, dolphins and even corvids all show highly intelligent behavior, which in recent years has become increasingly understood and appreciated. Palaeanthropologists argue that the exceptional human intelligence arose from the keen vision acquired in the rainforest, the upright walk together with a complete freeing of the hands for tool use adopted after our ancestors entered the open savannahs, and from our intimate social interactions in group living. Since our technological intelligence is based on the development of hands it is intimately connected with life on land. This is seen, for instance, by the modification of arms into fins or flippers when vertebrate land animals evolved back to life in the oceans. The development of our type of intelligence therefore is a consequence of the conquest of the land by animals and plants, which by a mutualistic relationship make animal life on land possible.

For this reason a whole new Chapter 3 “The Earth” on geology has been added, in which the phenomena of plate tectonics and continent formation are discussed. This has resulted in a renumbering of the remaining chapters. In addition, sections on the conquest of the land by plants and animals are greatly expanded to show the enormous difficulties that life encountered before it finally mastered the land 470 million years ago, over 3.5 billion years after it first appeared in the Earth’s oceans. The planetological history of the early Earth is discussed in greater detail to give more insight into how Earth-like planets form and how the chemical composition favorable for life arose. Finally the rapid advances over the last four years in all fields, from the search for planets to the search for the Last Universal Common Ancestor of all life, has been brought up to date.

Acknowledgements

I am greatly indebted to my colleagues Volker Storch (Zoology), Peter Leins (Botany), Mario Trieloff (Mineralogy), Hans-Peter Gail (Astrophysics) from Heidelberg as well as Uwe Walzer (Earth Sciences) from Jena who critically read parts of the manuscript. If there are remaining errors they are entirely my own. I also thank my children Katharina, Martin and Jakob as well as Philip Salmon for many critical and fruitful discussions about the content and logic of the presentation. The book is dedicated to my wife Helgard who never read any of it.

Contents

Part I Planets

1	Stars, Galaxies, and the Origin of Chemical Elements	5
1.1	The History of the Universe	5
1.2	Molecular Clouds	8
1.3	The Pre-Main Sequence Evolution of Stars	10
1.4	The Post-Main Sequence Evolution of Stars	12
1.5	Element Composition and Dating	15
1.5.1	Population I and Population II Stars	15
1.5.2	Dating with Radiometric Clocks	18
2	Planet Formation	21
2.1	Accretion Disks and Planetesimal Formation	21
2.2	Terrestrial Planets	23
2.3	Jovian Planets and Kuiper Belt Objects	26
2.4	The Migration of Jovian Planets	27
2.5	The T-Tauri Stage	28
2.6	Asteroids	30
2.7	Comets	33
2.8	Meteorites	35
2.9	Early History of the Solar System	36
3	The Earth	43
3.1	Planetological History of the Early Earth	43
3.2	Formation of the Moon	44
3.3	Ocean–Vaporizing Impacts	46
3.4	The End of the Heavy Bombardment	48
3.5	The Environment on the Early Earth	49
3.6	Seismology and the Earth’s Interior Structure	53
3.7	Volcanism and the Composition of Rocks	56
3.8	The Earth’s Core and Mantle	60
3.9	The Earth’s Magnetic Field and Sea Floor Spreading	62
3.10	Convection, Hot Spots and Plate Tectonics	65
3.11	Mountain Building and the Evolution of Continents	70
3.12	Plate Tectonics on Mars and Venus?	75

4	The Search for Extrasolar Planets	79
4.1	The Recently Discovered Planets	79
4.2	Direct Search Methods for Planets	82
4.3	Indirect Search Methods	82
4.4	Circumstellar Disks	85
4.5	New Search Strategies	86
5	Planets Suitable for Life	93
5.1	Habitable Zones	93
5.1.1	The Solar Habitable Zone	94
5.1.2	Habitable Zones Around Other Stars	96
5.2	Planetary Mass and the Evaporation of the Atmosphere	97
5.3	The Lifetimes of the Stars	100
5.4	Tidal Effects on Planets	101
5.5	The Increase in Solar Luminosity and the Continuously Habitable Zone	103
5.6	Instabilities of the Planetary Atmosphere	104
5.6.1	The Greenhouse Effect	105
5.6.2	The Carbonate Silicate Cycle	106
5.6.3	The Runaway Greenhouse Effect	106
5.6.4	Irreversible Glaciation	107
5.7	Axis Variations of the Planets	109
5.8	Biogenic Effects on Planetary Atmospheres	112
5.9	Proterozoic Proterozoic era Glaciations and Snowball Earth ..	113
5.10	The Requirements for Continuous Habitability	115
5.11	The Drake Formula	116
5.12	The Number of Habitable Planets	117

Part II Life

6	Life and its Origin on Earth	123
6.1	What is Life?	123
6.2	The Special Role of Organic Chemistry	124
6.3	The Elements of Biochemistry	124
6.3.1	Proteins, Carbohydrates, Lipids, and Nucleic Acids ...	125
6.3.2	The Genetic Code	130
6.3.3	ATP, the Energy Currency of the Biochemical World .	130
6.3.4	Synthesizing RNA, DNA, and Proteins	131
6.4	Cells and Organelles	133
6.5	Sequencing and the Classification of Organisms	135
6.5.1	Classification by Sequencing	135
6.5.2	The Molecular Clock	135
6.5.3	The Evolutionary Tree of Bacteria	136
6.5.4	The Timetable of the Evolution of Life	137

6.5.5	Sequencing and the Complete Genome	139
6.6	Geological Traces of Life	141
6.7	The Stage for the Appearance of Life	143
6.7.1	The Origin of the Genetic Code	143
6.7.2	The Urey–Miller Experiments	144
6.7.3	The Search for the Last Universal Common Ancestor	145
6.7.4	Summary: The Boundary Conditions	148
6.8	Abiotic Chemical Evolution and the Theories How Life Formed	150
7	Evolution	155
7.1	Darwin’s Theory	155
7.2	The Development of Eukaryotes and Endosymbiosis	158
7.3	Oxygen as an Environmental Catastrophe	159
7.4	The Cell Nucleus and Mitosis	160
7.5	Sexuality and Meiosis	161
7.6	Genetic Evolution	163
7.7	Multicellularity, the Formation of Organs, and Programmed Cell Death	165
7.8	Problems of Life on Land	169
7.8.1	Conquest of the land by plants	170
7.8.2	New organs of land plants	172
7.8.3	Conquest of the land by animals	177
7.9	The Great K/T Boundary Event	180
7.10	The Tertiary and the Evolution of Mammals	183
7.11	Primate Evolution	184
7.12	DNA Hybridization	194
7.13	Brain Evolution and Tool Use	195
7.14	Stone Tool Culture	197
7.15	Diet and Social Life	199
7.16	The Logic of the Human Body Plan	200
7.17	Evolution, Chance, and Information	203
7.18	Cultural Evolution	206
8	The Search for Extraterrestrial Life	209
8.1	Life in the Solar System	209
8.2	Europa’s Ocean	210
8.3	Life on Mars	212
8.3.1	Early Searches	212
8.3.2	The Viking Experiments	214
8.3.3	Mars Meteorites	216
8.4	The Early Atmosphere of Mars	218
8.5	Future Mars Missions	220
8.6	Life Outside the Solar System	222
8.7	UFOs	224

Part III Intelligence

9	The Future of Mankind	229
9.1	Predicting Mankind's Future	229
9.2	Settlement of the Solar System	230
9.2.1	The Space Station	231
9.2.2	Moon and Mars Projects	233
9.2.3	Space Travel	236
9.2.4	Near-Earth Asteroids and the Mining of the Solar System	238
9.2.5	Space Habitats	239
9.2.6	Cultural Impact of Space Colonization	242
9.3	Interstellar Travel	244
9.4	Mastering the Biological World	246
9.4.1	Creating Life in the Laboratory	246
9.4.2	The Decoding of the Human Genome	247
9.4.3	Understanding Intelligence	248
9.5	Androids and Miniaturization	249
9.6	Connected Societies	250
9.7	Fear of the Future	251
9.8	The Dangers for Mankind	251
9.8.1	Bacterial or Viral Infection	251
9.8.2	Episodes of Extreme Volcanism	253
9.8.3	Irreversible Glaciation and the Runaway Greenhouse Effect	253
9.8.4	Comet or Asteroid Impact	254
9.8.5	Supernova Explosions and Gamma Ray Bursts	257
9.8.6	Irreversible Environmental Damage	258
9.8.7	Uncontrollable Inventions	259
9.8.8	War, Terrorism, and Irrationality	259
9.9	Survival Strategies	260
10	Extraterrestrial Intelligent Life	263
10.1	Does Extraterrestrial Intelligent Life Exist?	263
10.2	What is the Hypothetical Nature of the Extraterrestrials?	265
10.3	The Drake Formula, the Number of Extraterrestrial Societies	268
10.4	The Lifetime of an Extraterrestrial Civilization	270
10.5	Distances to the Extraterrestrial Societies	272
10.6	SETI, the Search for Extraterrestrial Intelligent Life	273
10.6.1	Radio Searches for Extraterrestrial Civilizations	274
10.6.2	Possible Contact in the not too Distant Future	278
10.7	The Fermi Paradox: Where are the Extraterrestrials?	281
10.7.1	They do not Exist	281

10.7.2 Technically, a Visit is not Possible	282
10.7.3 They are Nearby, but have not been Detected	283
10.7.4 They are not Interested in Us	283
10.8 The Zoo Hypothesis	284
