The figures below replaces Fig. 4.19 in the thesis of B. Buchholz (Heidelberg, 1995).

In each of this figures are two additional circles drawn, which belong to the result of giant star modelling, in detail explained in section 4.8 of the thesis.

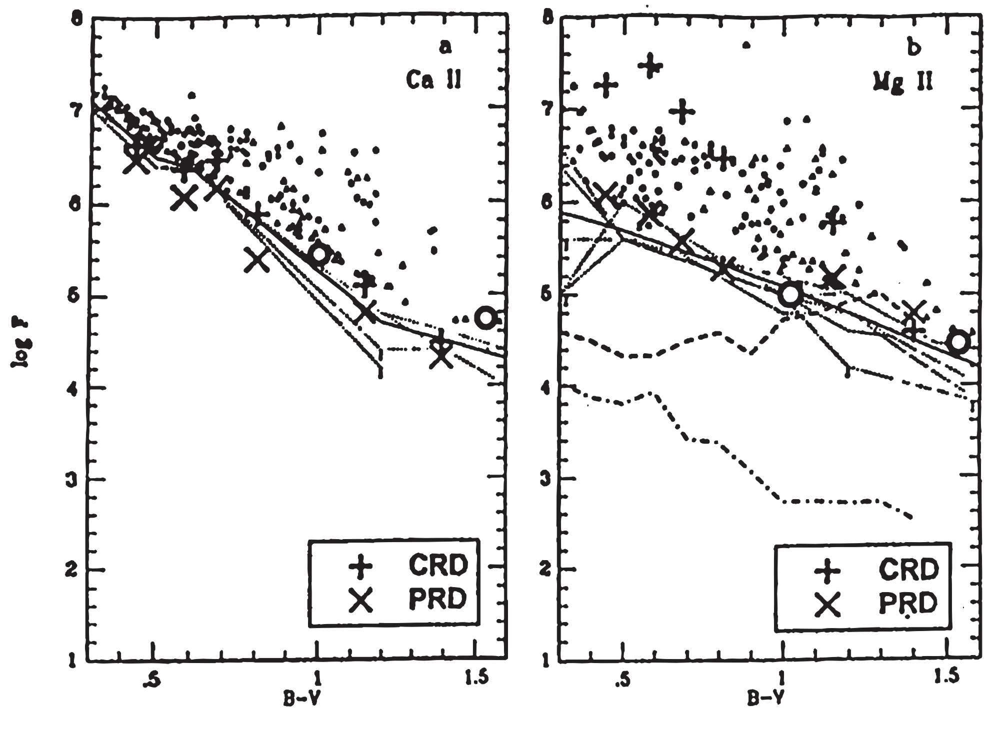

Figure 4.19: Theoretical emission fluxes compared with empirical fluxes (after Rutten et al. (1991), see also Chapter 1). Our results are shown as + signs (CRD) and crosses (PRD). The PRD emission fluxes of the two giant stars studied in Chapter 4.8 are given as circles.
